

File APAvaya.dump

The dump was done with Ethereal on the radius server, monitoring the traffic of the Avaya AP with IP address 172.31.194.32.

Registered data is relative to several message exchanges:

- Successful and failed authentication requests;
- Start and Stop pf accounting sessions;
- General broadcast packet with service information. Ethereal considers them as part of the IAPP protocol, though there is not an 802.11f standard approved yet (see links below for additional info)

File APCisco-2.dump

The dump was done with Ethereal on the radius server, monitoring the traffic of the Cisco AP with IP address 192.168.91.128.

The message exchange is relative to an accounting session. Notice the Vendor-dependant additional attributes in the messages.
